

Loan Portfolio Performance & Credit Risk Dashboard

Analysis of loan issuance, default behavior, and risk drivers (2007–2018)

Key Insights

1. Portfolio-Level Risk:

The overall default rate is 11.93% (about 1 in 9 loans), indicating moderate portfolio credit risk over the observed period.

2. Clear Risk Segmentation by Credit Grade:

Default rates rise steadily from Grade A to Grade G, with Grade G highest. This confirms effective risk segmentation across borrower quality tiers.

3. Loan Purpose Impacts Risk:

Small business loans have the highest default rate, suggesting business-related borrowing carries greater repayment risk than consumer-focused categories like debt consolidation.

4. Loan Term is a Major Risk Driver:

60-month loans consistently show higher default rates than 36-month loans, indicating longer durations increase default exposure.
